

Cannabis Grinding

Milling the cannabis plant is the preliminary stage to extracting the cannabis oils.

Quickly and continuously feed large quantities of plant material through the machine.

Future-proof against more stringent industry regulation and standards.

Sanitary design allows for easy cleaning.

Production Benefits

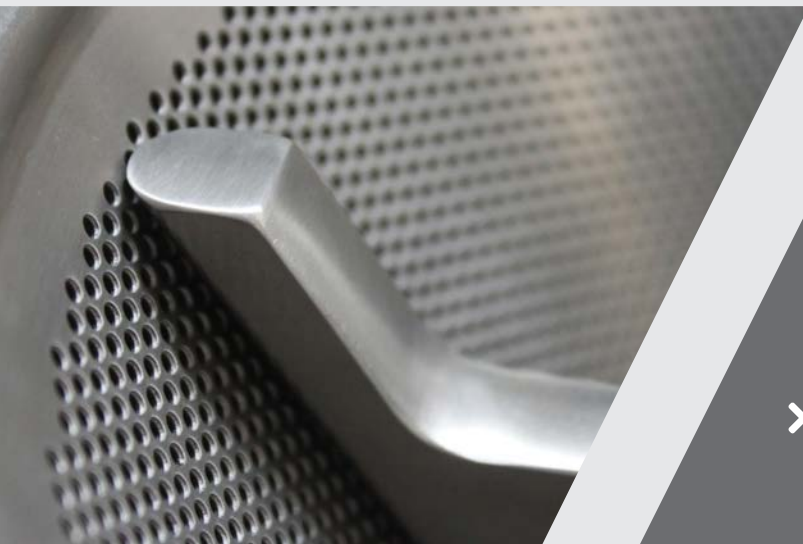

- Increased output of downstream processes
- Improved quality of final product
- Precise particle size distribution
- Increased efficiencies
- High throughput

Uni-Mill: Conical Grinder

Features

- › In-line inlet and outlet
- › All seals FDA compliant
- › Easy-clean, sanitary design
- › No metal-to-metal contact
- › Stainless steel construction
- › Interchangeable screens and impellers

Process Benefits

- › Easy to operate
- › High throughput
- › Process scalability
- › Low heat, dust and noise
- › Various particle sizes possible on one machine

Quality assured

FDA ready

Sanitary design
